

Managed Antivirus

A feature available with Team IT RMM

Protecting your system against viruses is like dealing with a moving target. Once an antivirus program learns how to block known malware, a new, unknown threat suddenly appears to potentially infect your workstations and servers.

The managed antivirus capabilities in Team IT®RMM can help your system proactively stay ahead of both known and emerging malware threats. Managed Antivirus not only keeps your network's security up-to-date with protection against the latest known threats via traditional signature-based protection, it protects against new viruses through sophisticated exploratory checks and behavioral scans of your system.

BLOCK KNOWN AND EMERGING MALWARE

- » **Signature-based scanning** – Extensive, signature-based threat detection works to block all known threats.
- » **Heuristic checks** – Protect against previously unknown threats using heuristic checks, which detect unrecognized viruses in a sandbox environment, away from a business' core systems.
- » **Continuous, real-time monitoring** – Ongoing scans of your system help detect programs that perform behaviors and actions commonly associated with malware exploits.

MINIMIZE RESOURCES NEEDED FOR THREAT PREVENTION

- » **Lightweight scans** – By reducing the size of scans, system resources can maintain high performance levels.
- » **More accurate scanning** – More precise scans can help reduce the number of false positives.
- » **Scheduling options** – Schedule deep scans for off-hours so you don't disrupt employees during important productive times.

CONTROL MORE OF YOUR VIRUS PROTECTION

- » **Default policies** – Save time by using our default policies for servers, desktops, and laptops.
- » **Customization** – Create your own policies by modifying factors, such as quarantine rules, exclusion settings, and definition update schedules.
- » **Better control** – Depending on your system needs, you can pause or cancel scans.
- » **Easy rollout** – Deploy Managed Antivirus in bulk across sites, servers, and workstations.
- » **Endpoint branding** – Set up your Managed Antivirus instance to include your company name, website, and support details.
