	ocsp.digicert.com	96	Trustworthy
	settings-win.data.microsoft.com	88	Trustworthy

Web-based threats are growing more complex and increasing in number. Phishing sites, drive-by malware sites, or even adware on legitimate sites all look innocent enough—but a data breach may be only a click away.

A successful attack may take only seconds, but the downtime it causes can be catastrophic, potentially affecting you and potentially your customers' business, and damaging your reputation. Protect yourself today from a single, easy-to-use, web-based console.

DID YOU KNOW

*4% of people will click on any given phishing campaign.**

PROTECT THE IT YOU MANAGE

- » **Access controls** – Keep users away from malicious sites
- » **Threat protection** – Protect against malware downloads, phishing, adware, botnets, and spam threats
- » **Monitor bandwidth** – Monitor daily usage with automated checks and alerts
- » **Threat Intelligence** – continually updated Webroot® BrightCloud® intelligence keeps protection up to date

STAY IN CONTROL

- » **Custom policies** – Use the default policies or create your own for desktops, laptops, or servers
- » **Custom URLs** – Add custom URLs to 'dial-in' protection
- » **Site blacklists** – Define and enforce browsing policies that keep users away from social media, web-based personal email, gaming, or other non-work related sites
- » **Time-based browsing policies** – Modify blacklist policies to allow users to visit sites outside of business hours
